how to perform API documentation.

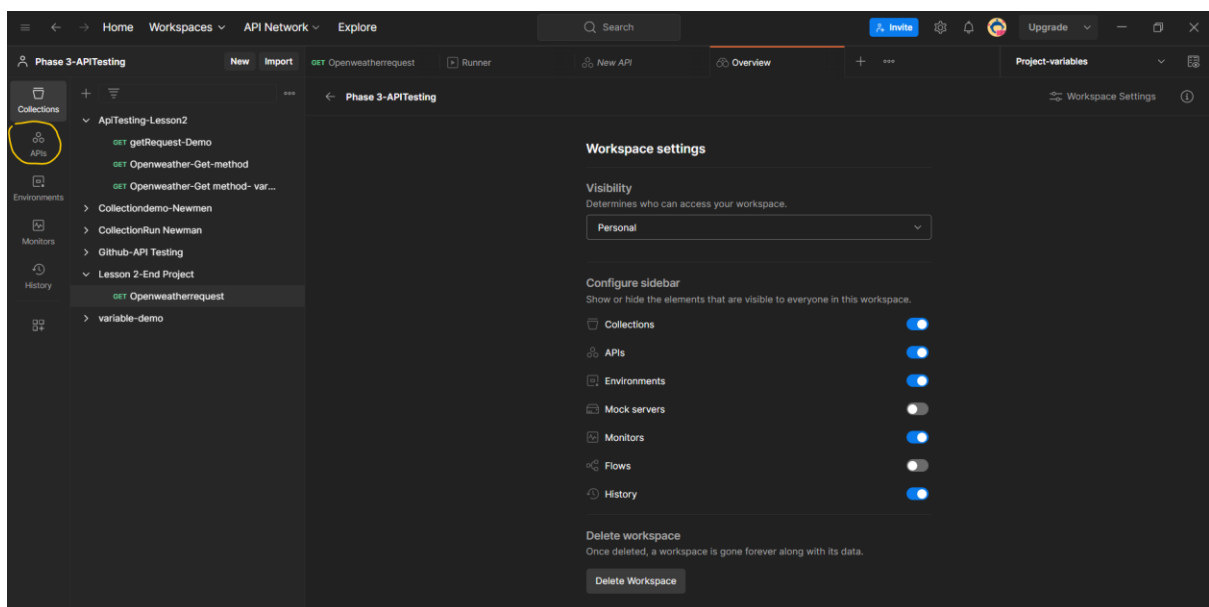

---

---

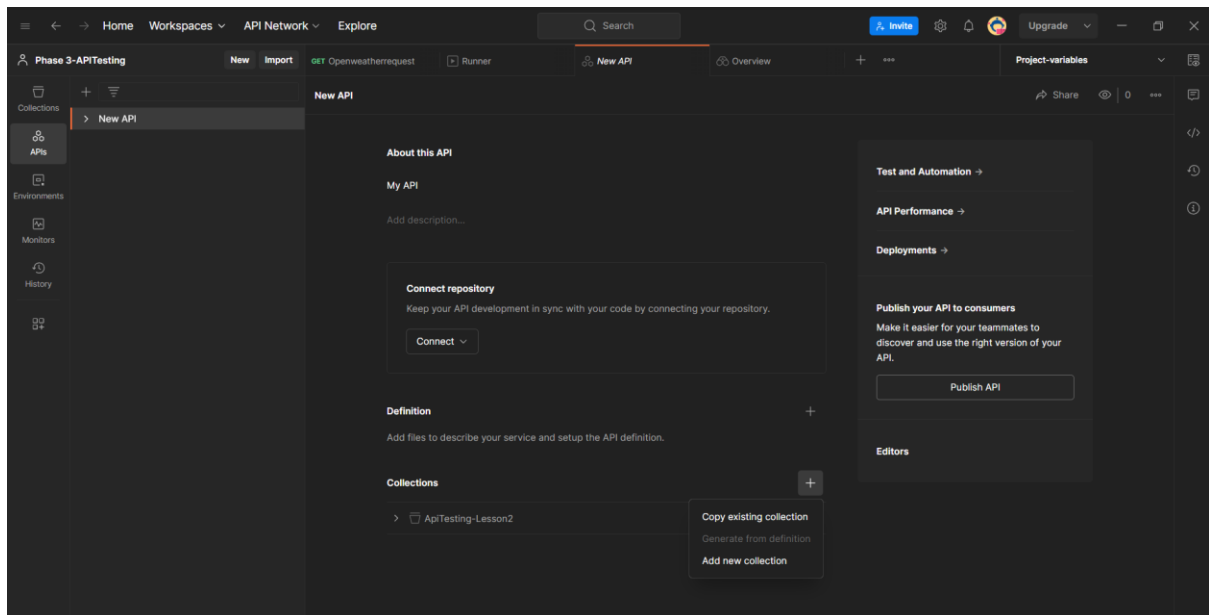

For the first step to perform API documentation you need to click on marked sign as show below, therefore this Workspace settings will open and then select option APIs.

When you will select the APIs option then in left side APIs will be visible down to collections as shown below

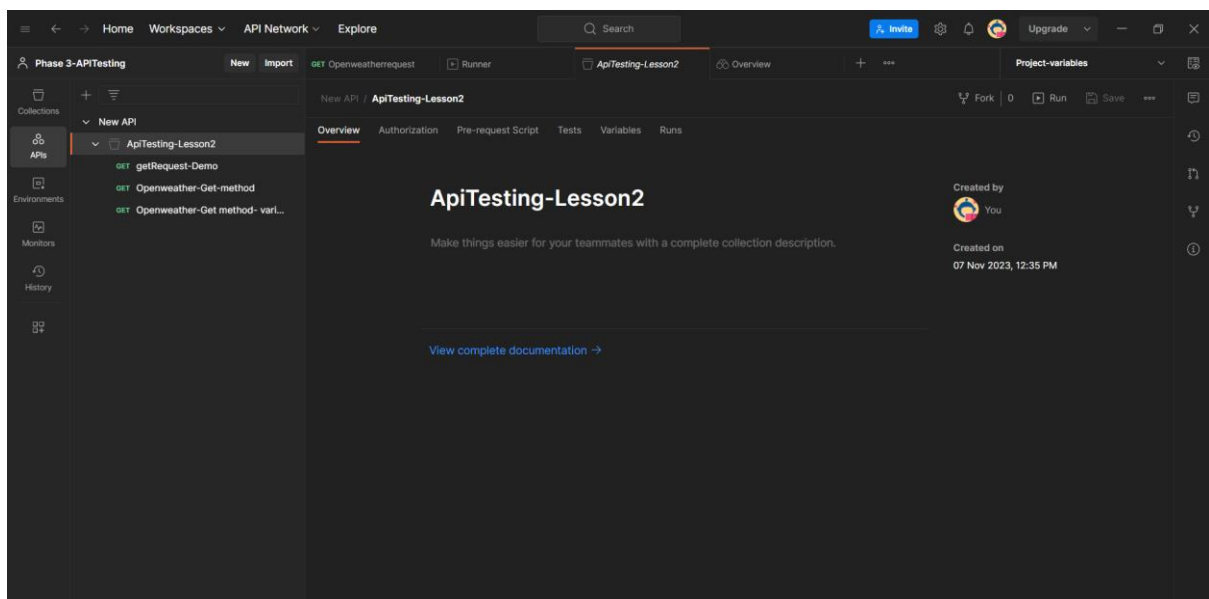

After click on APIs you will be directed to next step

As shown in the above screenshot there you have to click on collections and have to Add new collection or have to select existing collection for creation of API documentation .

As I have selected existing collection which I have created previously

Next: you need to click on to View complete documentation
